Mango Tag™

Shipping: On Dry/Blue Ice Catalog numbers

BIO-21083: 1000 Units

Batch No.: See vial Concentration: 2x

Store at -20 °C

Storage and stability:

The Mango *Taq* is shipped on dry/blue ice. On arrival store at -20 °C for optimum stability. Repeated freeze/thaw cycles should be avoided. Thaw, mix, and briefly centrifuge each component before use.

When stored under the recommended conditions and handled correctly, full activity of the kit is

Safety precautions:

Please refer to the material safety data sheet for further information.

Unit definition:

One unit is defined as the amount of enzyme that incorporates 10nmoles of dNTPs into acid-insoluble form in 30 minutes at 72 °C.

Notes:

For research or further manufacturing use only.

Trademarks:

Mango Taq and MangoMix are Trademarks of Bioline Reagents Ltd.

Features

- Excellent price and performance
- Easy visual recognition
- Direct loading onto agarose gels
- Robust performance
- Available as a ready-to-use 2x Reaction mix (MangoMixTM)

Applications

- For high throughput applications
- Suitable for a wide range of PCR assays
- Products suitable for TA cloning

Description

Mango Taq™ DNA Polymerase is a formulation of Taq DNA Polymerase which offers high yield across a wide range of DNA templates. Mango Taq DNA Polymerase possesses 5´-3´ exonuclease activity and leaves an ´A´ overhang such that the PCR product is suitable for effective integration into TA cloning vectors. The polymerase is supplied with two different reaction buffers for greater user flexibility. For high-throughput applications, Mango Tag and the colored reaction buffer make an ideal choice, since this combination enables the user to load directly on a gel in order to facilitate easy recognition.

The two reaction buffers supplied are: 5x Colored Reaction Buffer and 5x Colorless Reaction Buffer. The colored reaction buffer contains red and orange dyes, which separate during electrophoresis and provide quick reference points for monitoring the mobility of the DNA samples in the gel. The colored reaction buffer can be loaded directly onto an agarose gel for analysis, without the need for separate gelloading buffer. The presence of the dyes has no effect on routine enzymatic manipulations, although rare exceptions may exist.

Since the colorless reaction buffer does not contain reference dyes, it is suitable for use when reaction products will be used directly for down-stream processes involving absorbance or fluorescent detection.

Components:

	1000 Units
Mango <i>Taq</i>	200 μL
5x Mango <i>Taq</i> Colored Reaction Buffer	4 x 1.5 mL
5x Mango <i>Taq</i> Colorless Reaction Buffer	4 x 1.5 mL
50 mM MgCl ₂ Solution	2 x 1.2 mL
